Vehicle is identified by **VID** and has attributes (color,manufacturer,fuel type, model,plate no.,vtype)

Vehicle is classified into one of the three types

car has body type

Scooter has max speed

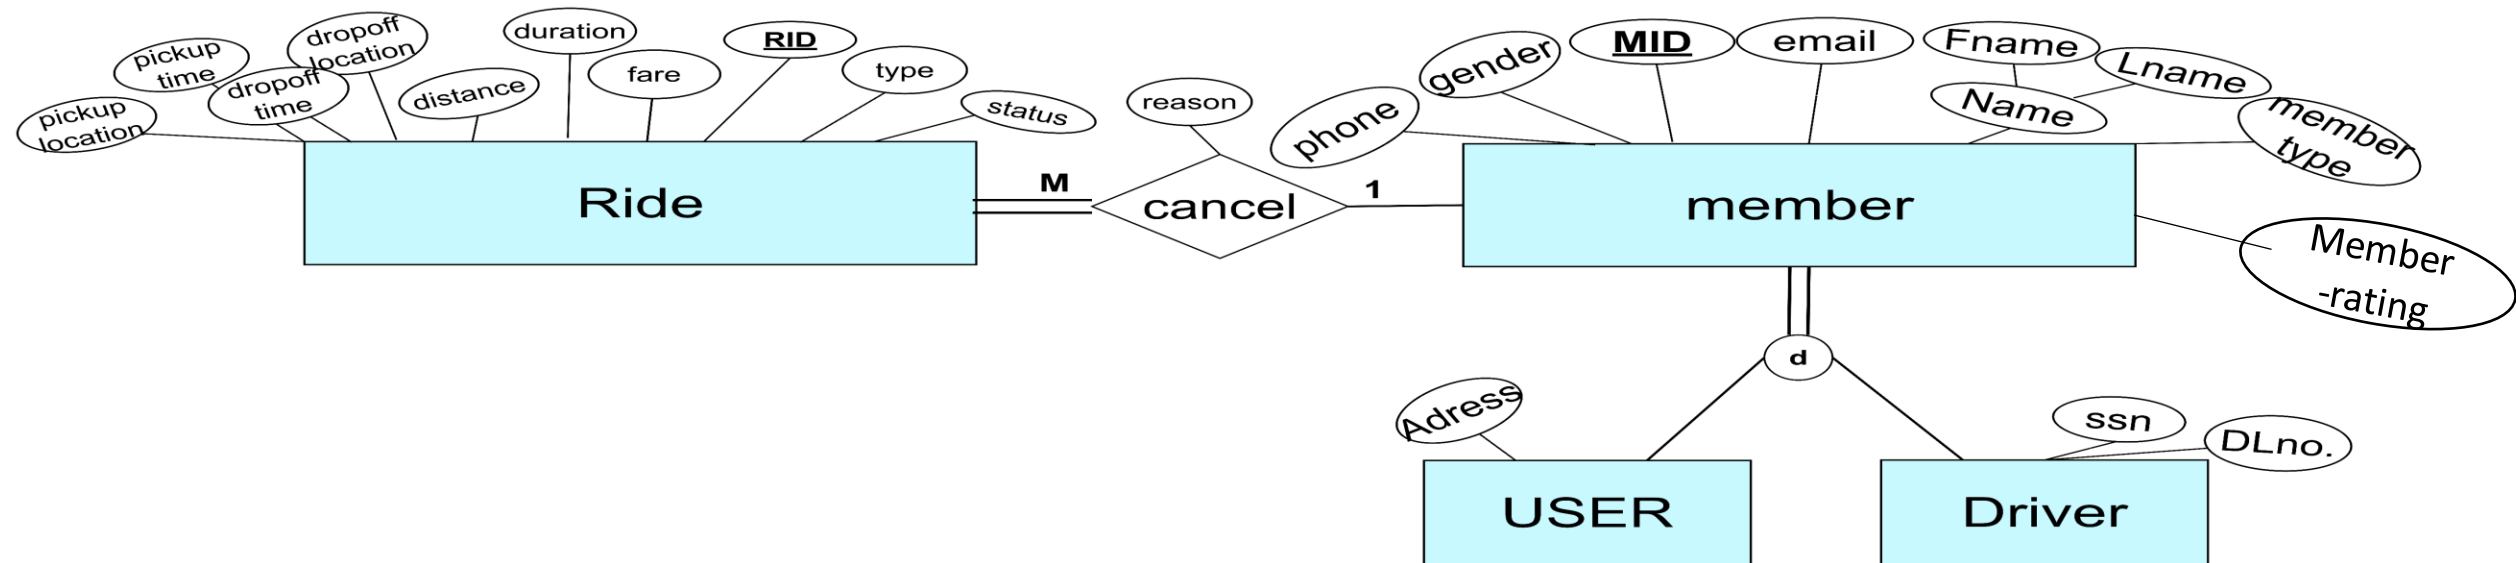

Bus has seating capacity

Reationships

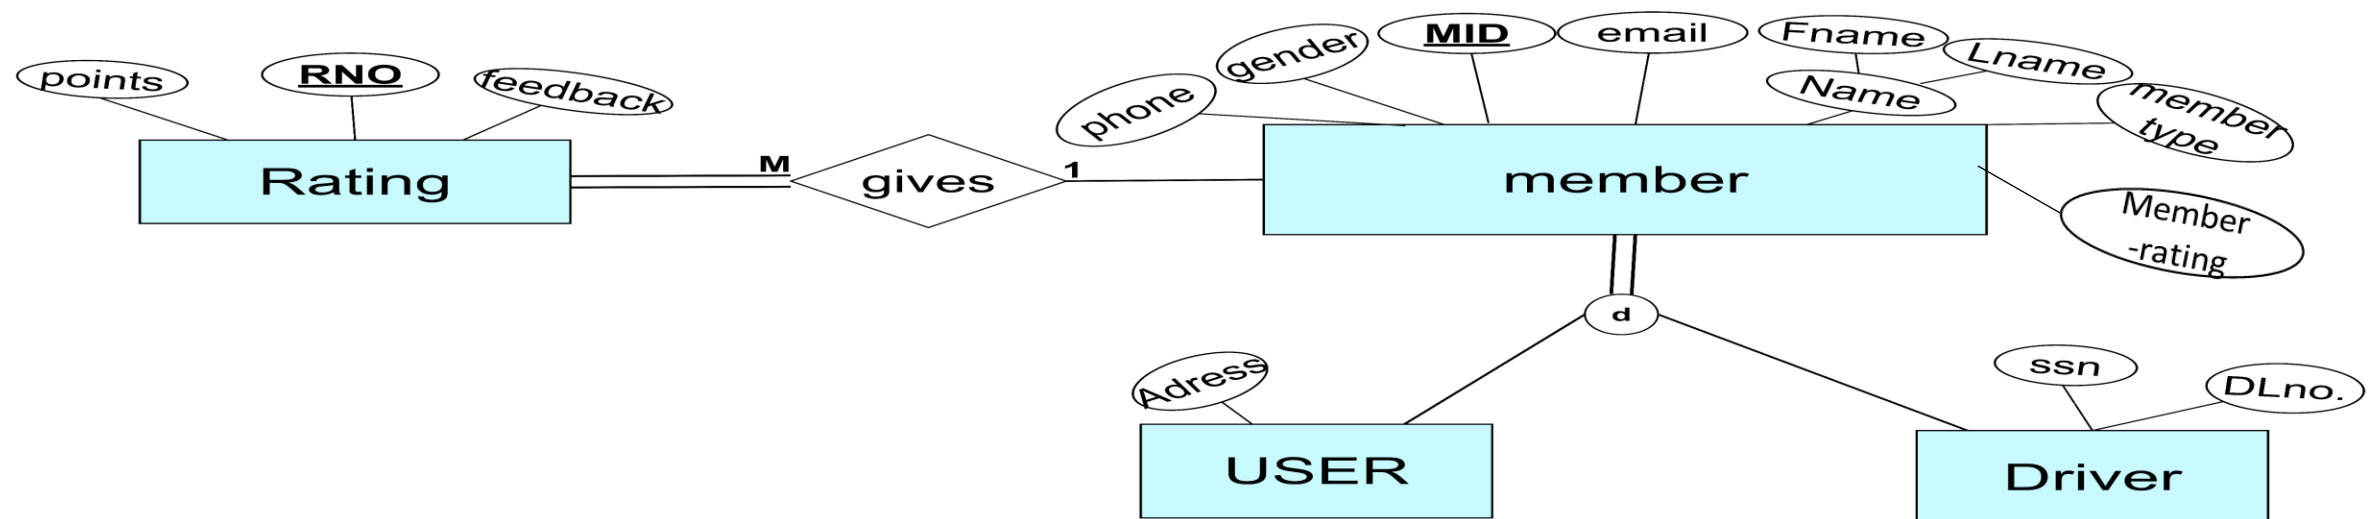

-Member relationships

Member-ride:any users and drivers can cancel many rides

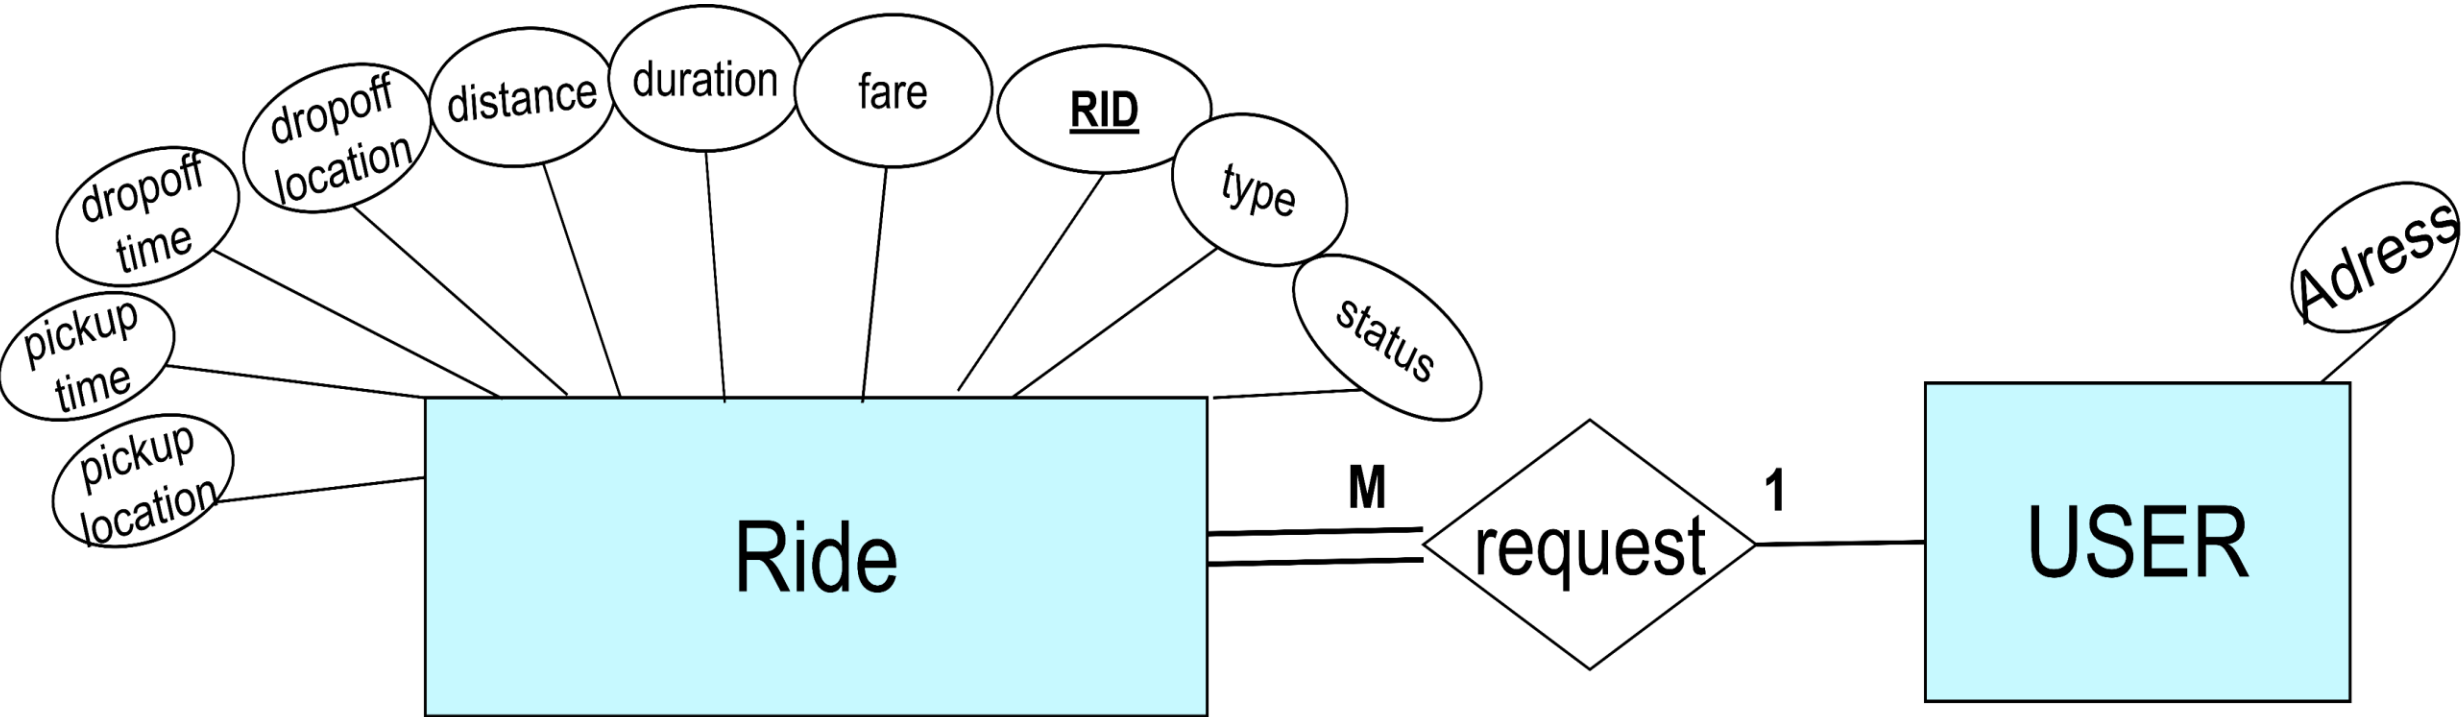

Ride must be canceled by one member

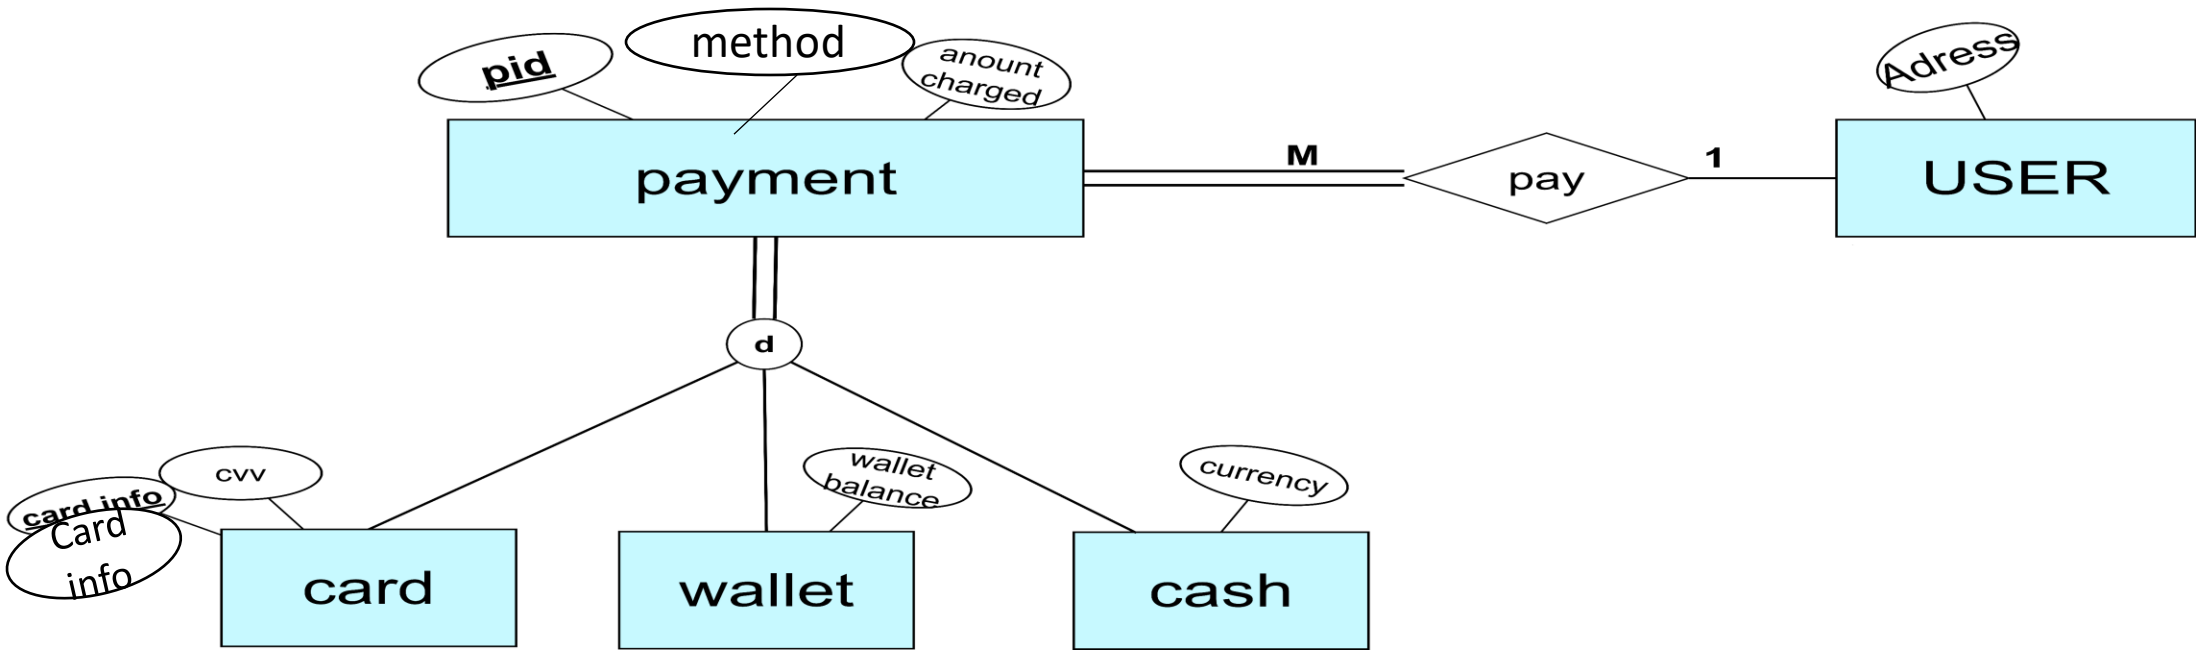

Member-rating:User and driver both can give points out of 5 and write his/her feedback about the ride when the ride is completed

user-ride :user may request many rides of any type he/she wants and the request is sent to many drivers ,ride is requested by a user

user-payment user pay payments for his rides when ride is completed reached their targeted dropoff location they can use any payment method (card,cash,wallet) he/she likes A payment amount charged must be paid by one user.

user-offers User may has many offers allocated to him/her by uber company each offer has its promocode and it's discount percentage

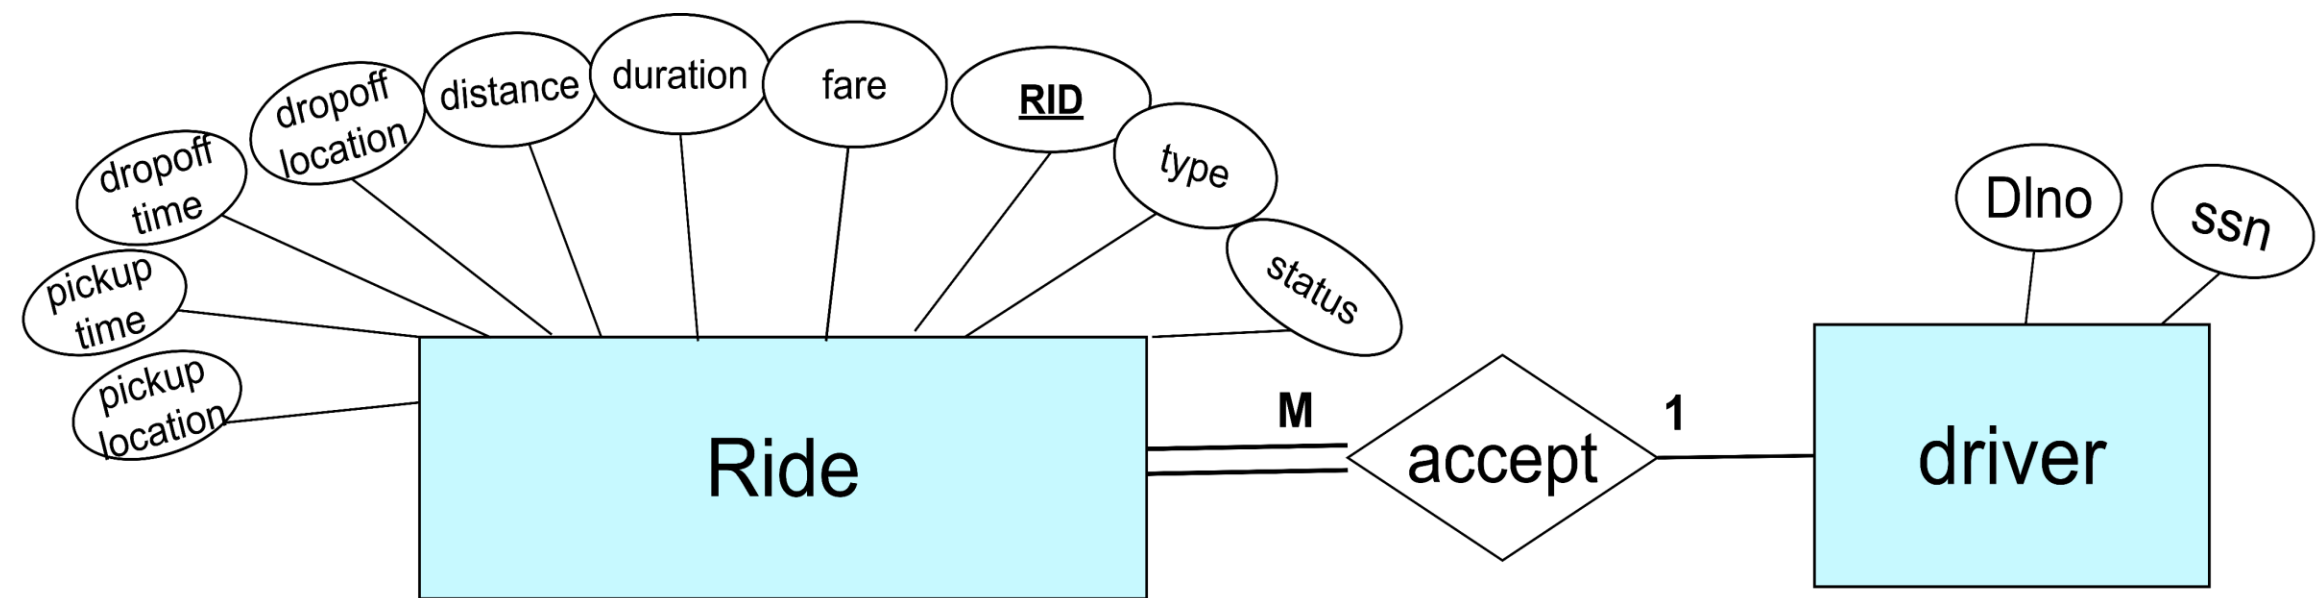

Offers discounts,promocodes are allocated to many users

Driver relationships

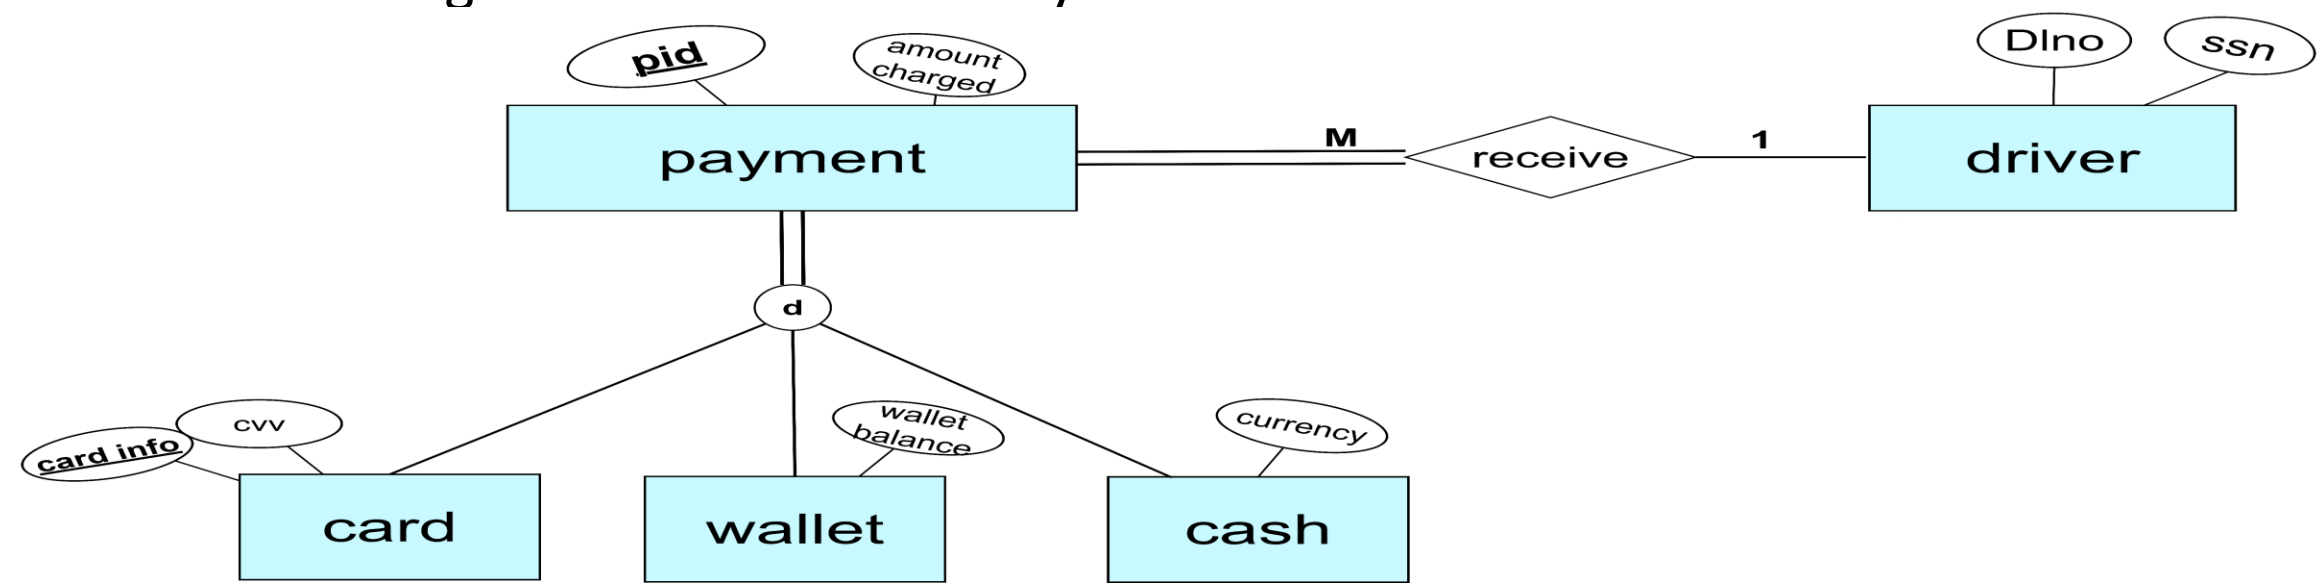

driver-ride :Driver may get many rides requests from many user and he has choice to accept or not

A ride must be accepted by a driver

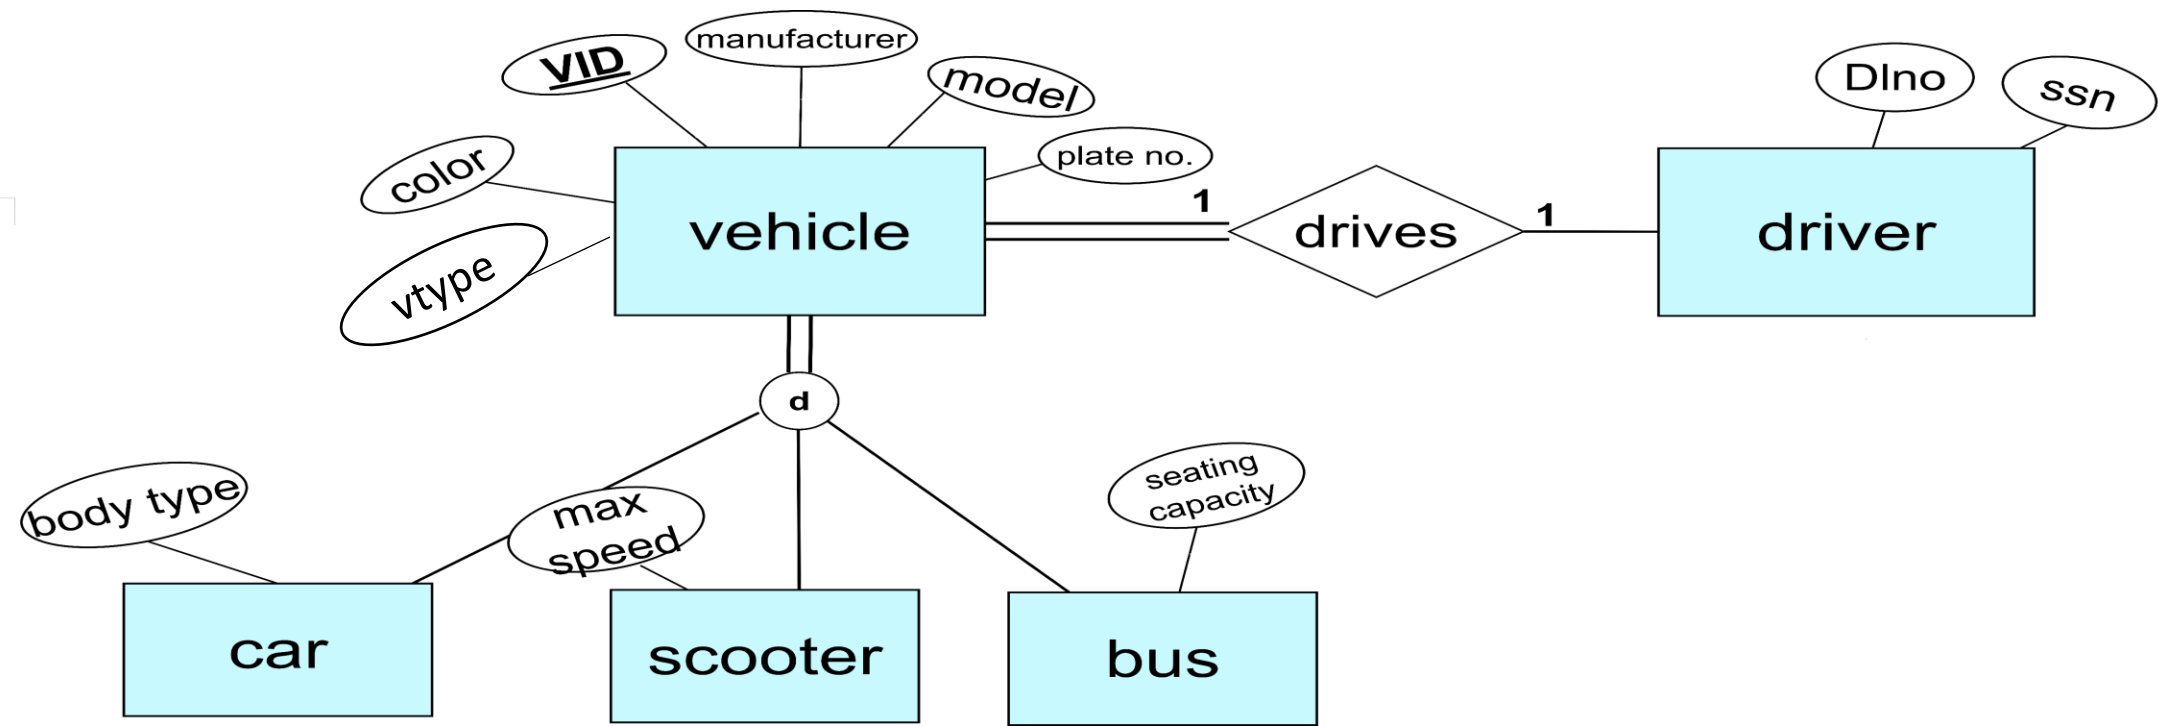

driver-payment Driver receive the amount charged only when he/she drop off user to his targeted dropoff location

a Payment amount charged must be received by one driver

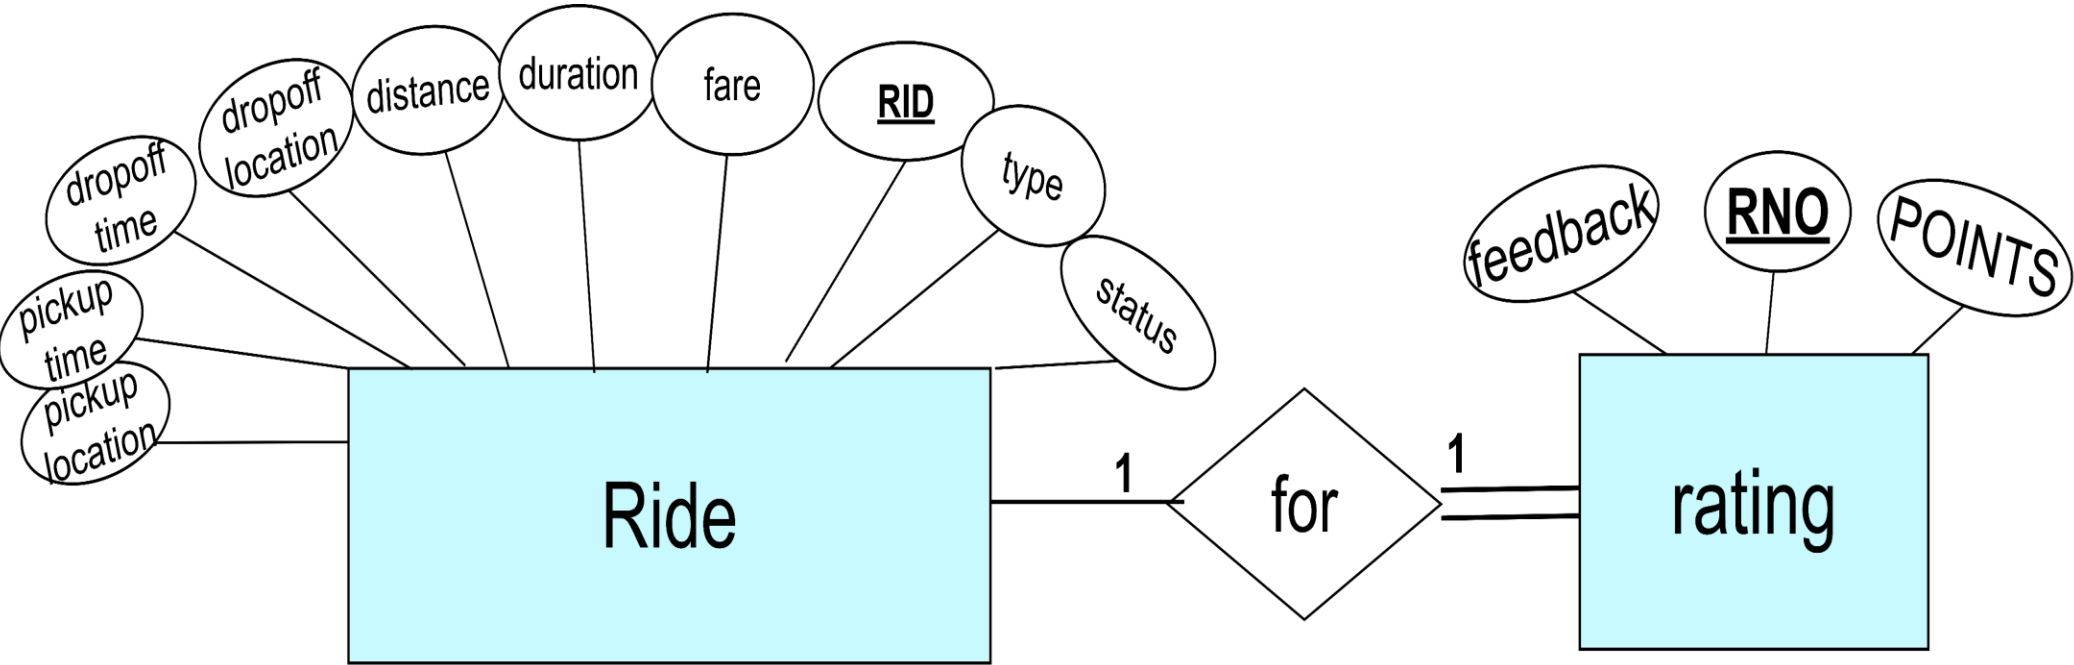

Driver-vehicle : driver drives a vehicle to drive users to their destination,Vehicle must be driven by one driver

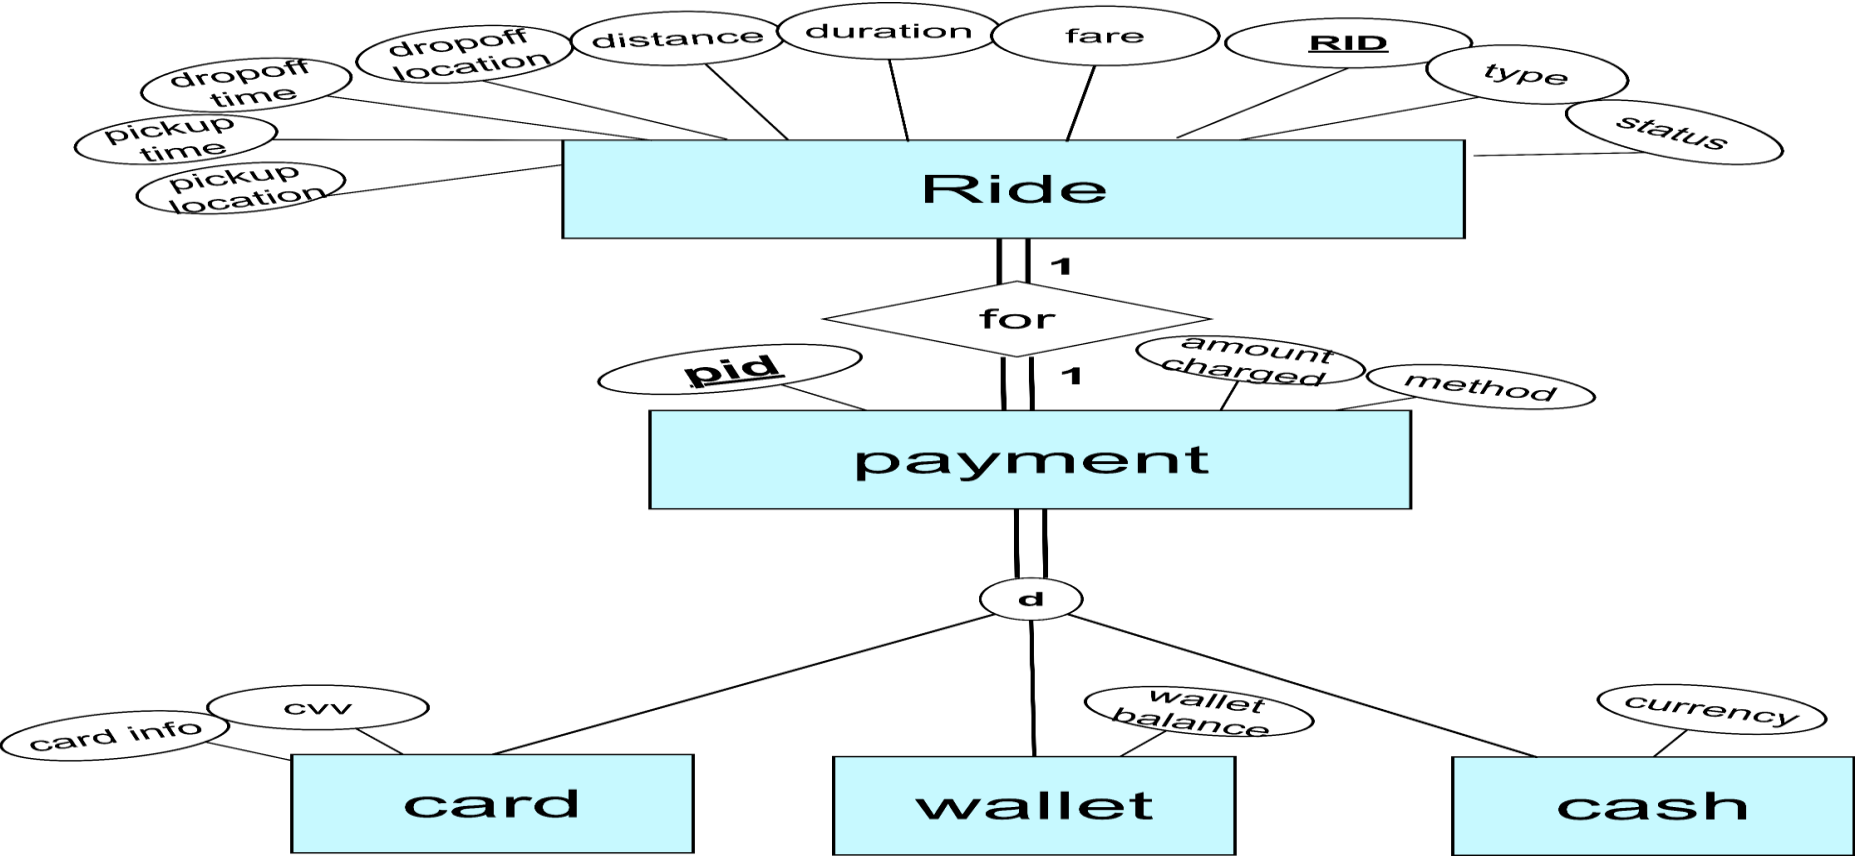

Driver-shift: driver can work in many shifts as much as he/she likes in one day
he can login and accept many rides requests ,and logout when he is not available and login again when he finds himself available , Shift must have many drivers works in it

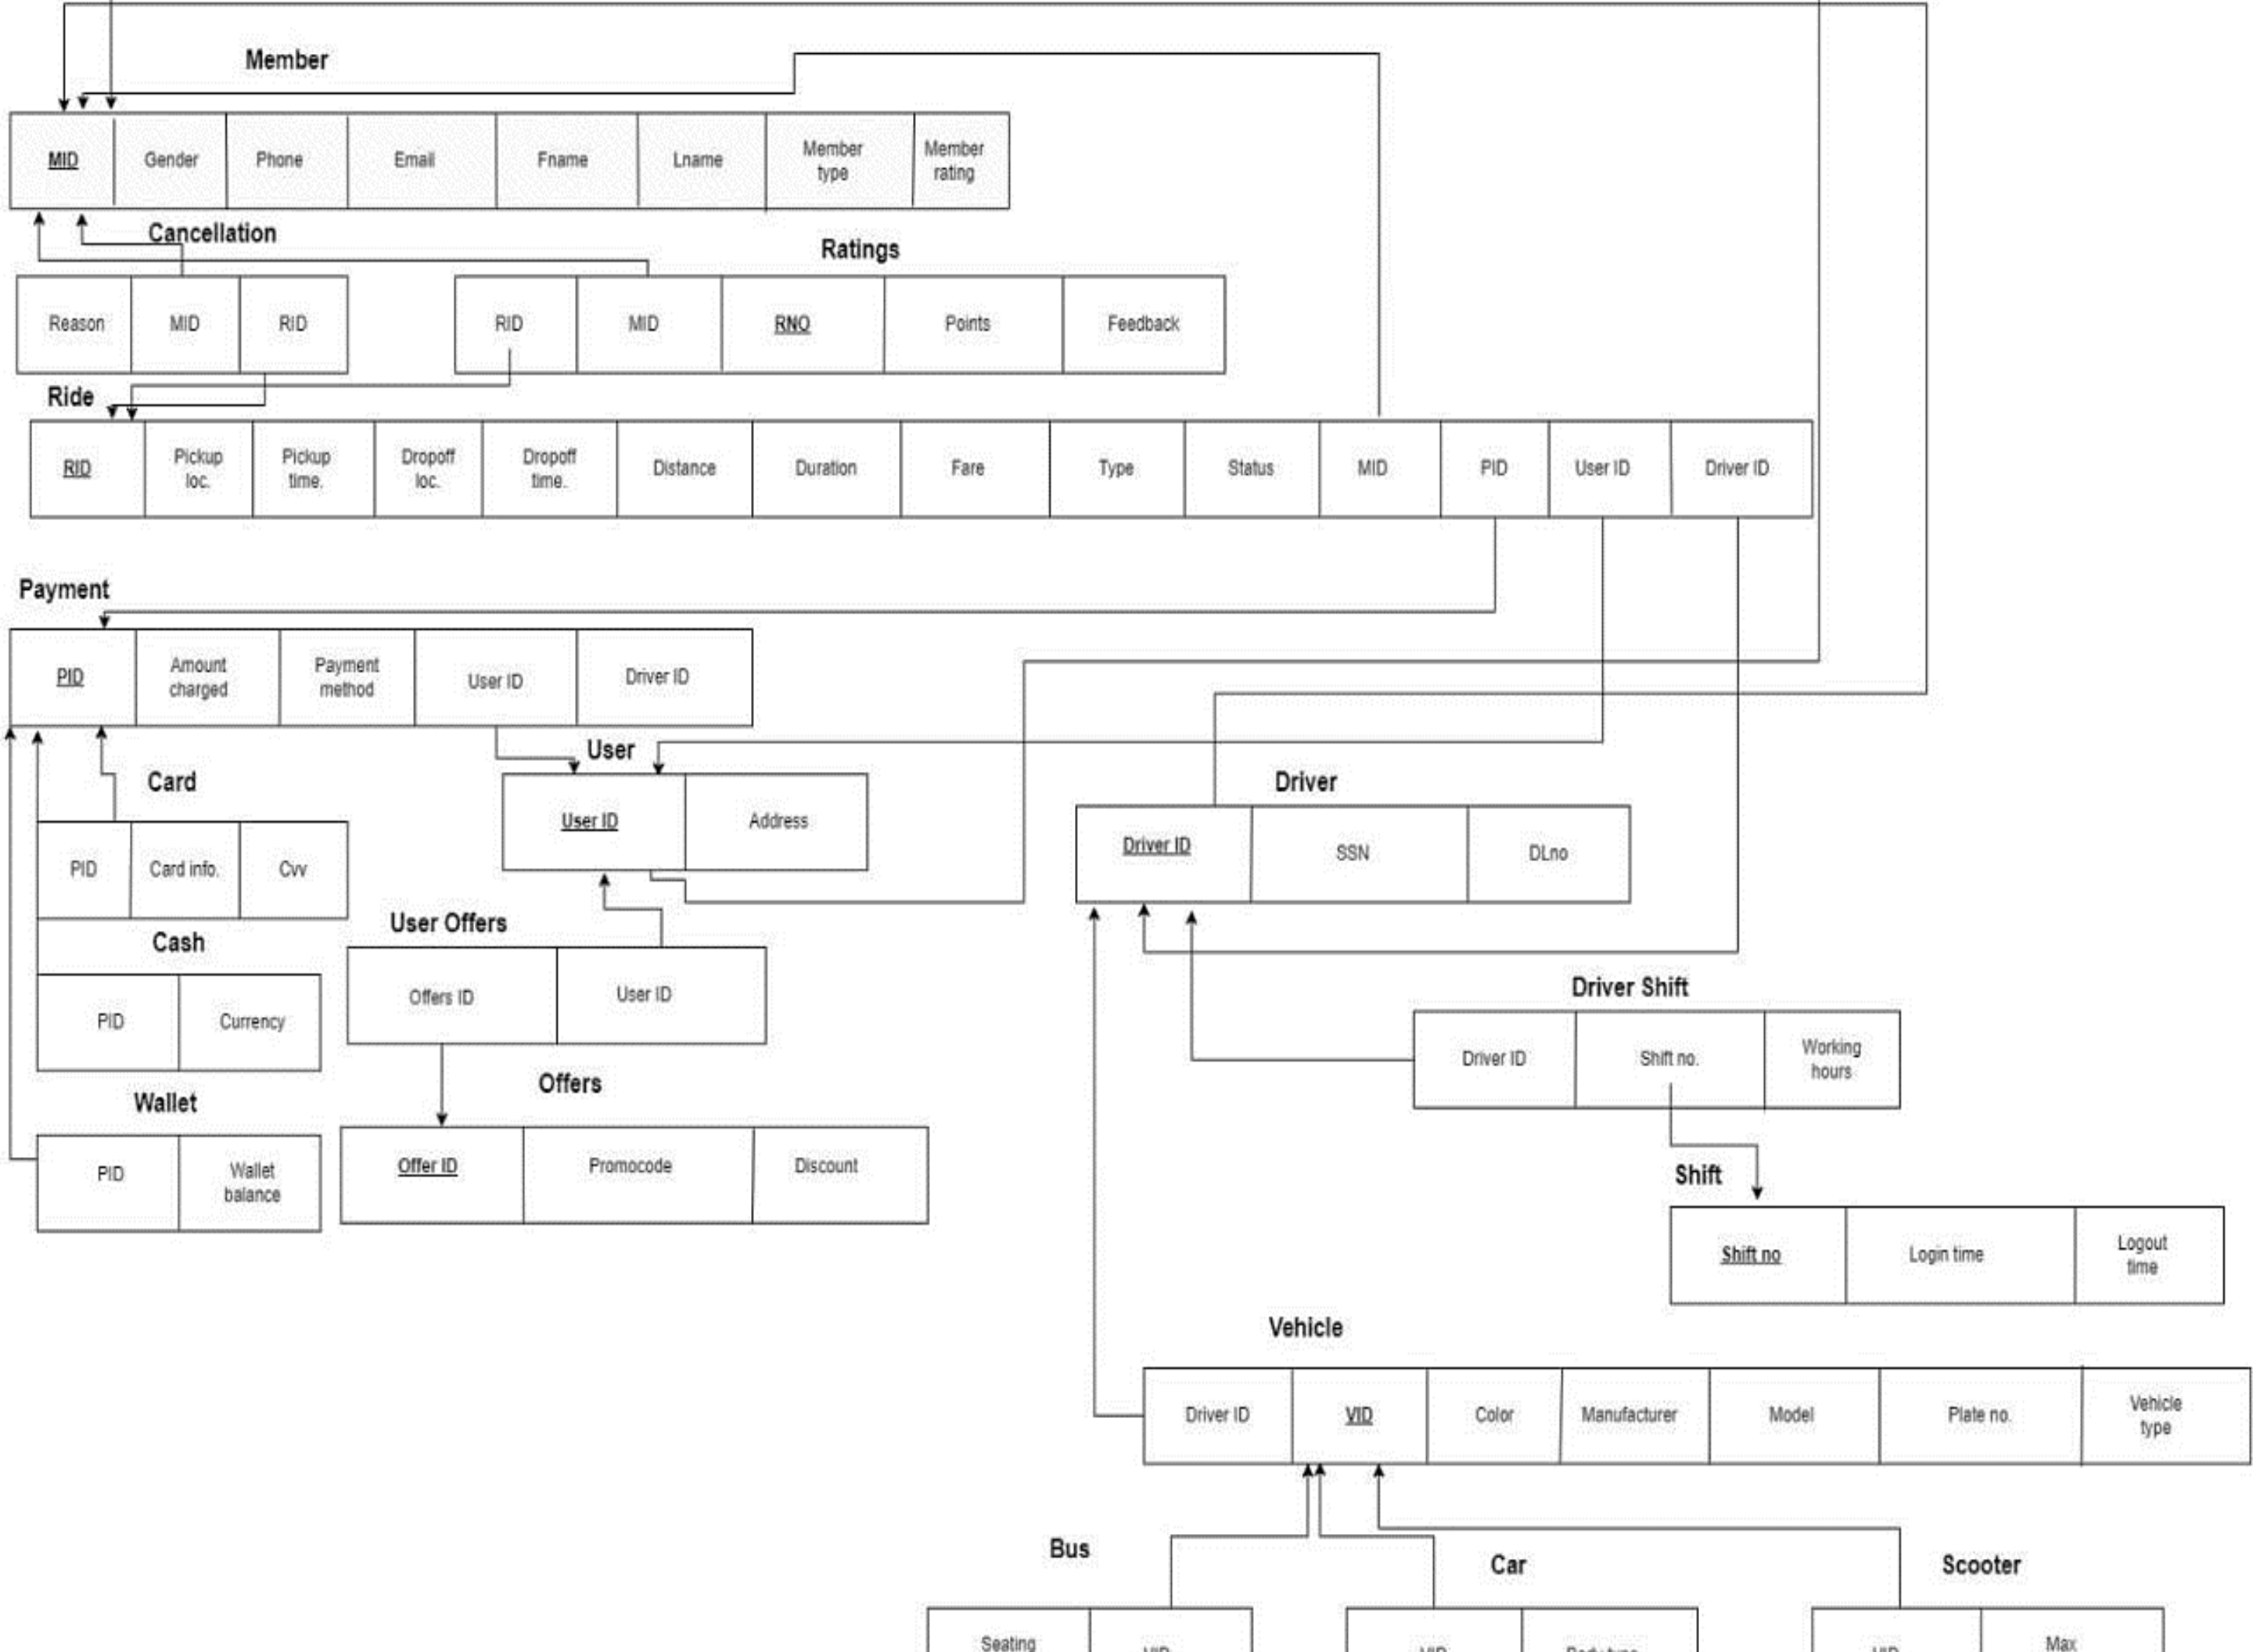

Ride-rating:Each ride may have rating if uber members rated the ride, a rating must be for one ride

Ride-payment :each ride must must be paid by any payment method the user choose (card,cash,wallet)
And each payment mus be for one ride

Uber Mapping :

- **Member** has an attributes (MID, Gender, phone, email, Fname, Lname, Member type , Member_Rating) **primary key (MID)**
- **User**: has an attributes(Address), primary key and Foreign key (UserID) Reference (Member).
- **Offers** Has an attributes(Offers ID , Promocode , Discount). **primary key (Offers id)**
- **User offers** it's a (M.M) relation between user and offers
composite key,foreign key(UserID,Offer Id) Reference (Member, offers).
- **Driver**: It has an attributes (SSN,DLno) Primary and Foreign Key (DriverID) Reference (Member).
- **Ride**: It has an attributes(RID, Distance, Pickup time, Pickup location, Dropoff location, Dropoff time, Time, Fare, Duration, Completed, Canceled, Pending) **primary key (RID)**
Foreign keys (PID, MID,UserID,DriverID) Reference (payment , Member,User,Driver)
- **Cancellation**: It's a relation between Driver and Ride , User and Ride It has an attribute (Reason)
composite key (RID , MID)
Foreign keys (RID , MID) Reference (Ride, Member)
- **Ratings** it has an attributes (RNO, Points, Feedback) and it's
primary key (RNO)
Foreign key (RID, MID) Reference (Ride , Member).

Shift it has an attributes (**Shiftno.**, Login time, Logout time). **Primary key(shiftno.)**

-Driver Shifts: It's a relation between driver and shifts it has an attribute(Working Hours), it has w foreign keys(**Shiftno.**, **DriverID**) Reference (Shift, Driver).

-Payment: It has an attributes (Amount charged , Payment method,) **Primary key(pid.)**
Foreign keys (UserID, DriverID) Reference (User , Driver).

-Cash: it has an attribute (Currency) and **Foreign key (PID)** Reference (Payment).

-Card: it has an attributes (Cvv , Cardinfo) **Primary key(cardinfo.)**
Foreign key (PID) Reference (Payment).

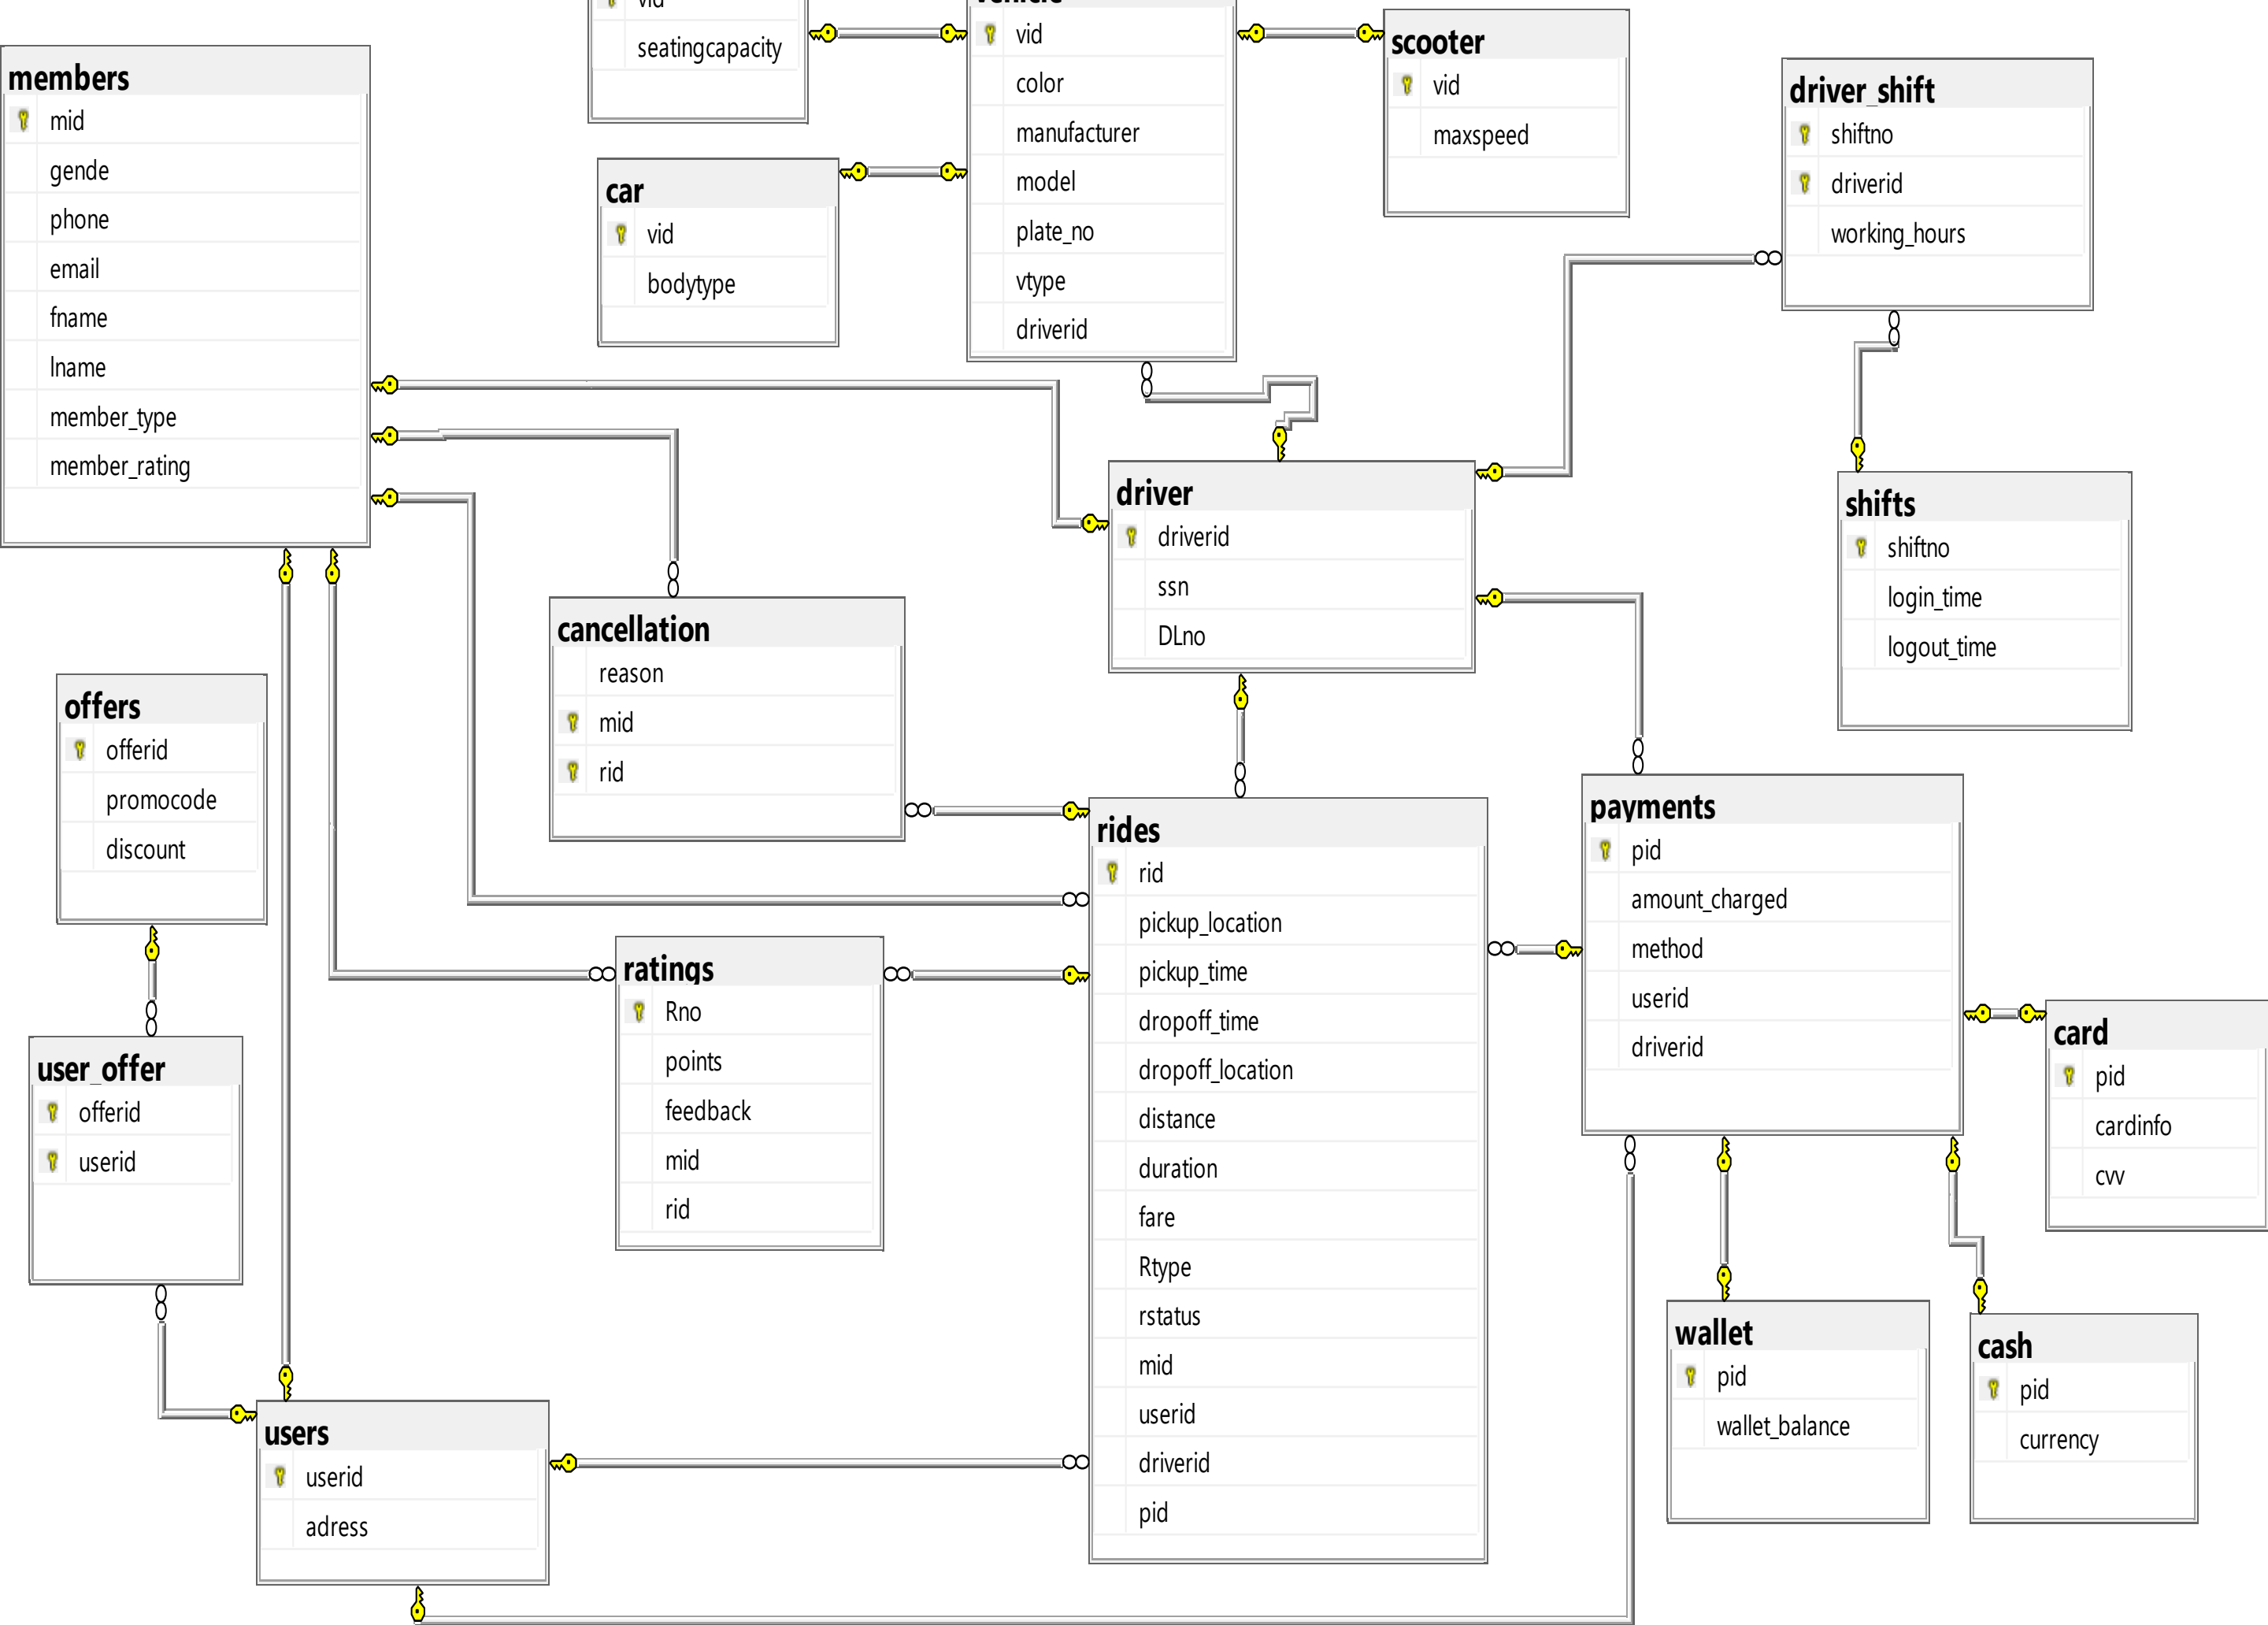

-Wallet: it has an attribute (Wallet Balance) and **Foreign Key (PID)** Reference (Payment).

-vehicle: it has an attributes(VID , Manufacturer, Color, Model, Fuel type,plate no. , Vehicle Type) and ,
primary key (VID) Foreign key(**DriverID**) **Reference** (Driver).

-Car: it has an attribute (Body type) and **Foreign key (VID)** Reference (Vehicle).

-Scooter: it has an attribute (Max Speed) and **Foreign key (VID)** Reference (Vehicle).

-Bus: it has an attribute (Seating Capacity) and **Foreign key (VID)** Reference (Vehicle).

User rides history Each user has his own ride history including all info about his ride

```
